# Niki Namian

Los Angeles, CA | (310) 597-9006 | nikinamian06@gmail.com | Website |LinkedIn | GitHub

## EDUCATION

**University of California, Berkeley** **Jun. 2028**
*Bachelor's Degree, Computer Science*
**Santa Monica College | GPA: 3.9** **Jun. 2026**
*Associate in Science for Transfer (AS-T), Math & Computer Science (Highest Honors, Scholars/STEM Program)*

## TECHNICAL SKILLS

**Languages:** Python, C++, Java, C, C#, JavaScript, SQL, HTML/CSS, Assembly
**AI, ML & Data:** Large Language Models, Computer Vision, Sentiment Analysis, Random Forests, Scikit-learn, Pandas, NumPy, Matplotlib, Reinforcement Learning from Human Feedback (RLHF), Graph Neural Networks (GNNs), Linear Regression, Natural Language Processing (NLP)
**Tools:** GitHub Actions (CI/CD, unit testing), Docker, Azure/Fabric, Streamlit, VS Code/Xcode, REST/AI APIs, MongoDB
**Competencies:** DSA, OOP, Web Development, Debugging, System Architecture, GPU Computing, Authentication/Security

## WORK & INTERNSHIP EXPERIENCE

**NASA Jet Propulsion Laboratory (JPL)**, La Cañada Flintridge, CA
*Machine Learning Intern* **Jun. 2026 - Aug. 2026**
- Engineered Python automation scripts and ML models querying 100,000+ MongoDB mission records, enabling a 4+ hour reduction in schedule deconfliction per phase.
- Built an LLM-driven NLP pipeline capable of cutting manual scheduling overhead by >20%, documenting data flow and workflows through detailed system architecture diagrams.
- Achieved ~74% accuracy by validating predictive models and pipeline scripts against past DSN mission logs.

*Student Research Intern* **Dec. 2024 - Jun. 2025**
- Benchmarked next-gen multi-core and DSP/GPU architectures to optimize onboard space computing.
- Engineered 3 virtual test environments (including NVIDIA Omniverse) with GNNs and AI to simulate missions.
- Developed cross-platform registration and authentication systems utilizing spatial web properties, executing system latency tests to identify and resolve network bottlenecks.

**Santa Monica College**, Santa Monica, CA **Oct. 2025 - Jun. 2026**
*Supplemental Instructor for Data Structures & Algorithms in C++ & CS Tutor*
- Led weekly debugging sessions (C++, C, C#, Java) for 150+ students for topics like Trees, Heaps, and Stacks.
- Diagnosed pointer errors, coaching students through C/C++ memory management and unit test debugging.
- Streamlined development workflows using GitHub Actions CI/CD pipelines and standard VS Code environments.

**Handshake**, Los Angeles, CA (Remote) **Feb. 2026 - May 2026**
*AI Trainer*
- Enhanced Multimodal LLM response accuracy and alignment across 3 data modalities (video, image, and text) by executing RLHF workflows and evaluating complex technical outputs for frontier AI labs.

## PROJECTS

**Ticker Talk AI**
- Engineered a predictive price model forecasting next-close targets and ±1 standard deviation volatility bands by fitting Linear Regression on 60-day rolling time-series data using Scikit-learn, Pandas, and NumPy.
- Created a thread-safe caching layer (RLock, 600s TTL) to prevent API throttling and enable concurrent chart rendering from real-time Finnhub/yfinance streams.

**LensAI**
- Developed a multimodal vision app using Python and Streamlit to generate contextual photo analyses and customized recommendations via Gemini API.
- Built multi-turn conversational memory and a 3-attempt exponential backoff loop to avoid API rate-limit crashes.

## LEADERSHIP & COMMUNITY INVOLVEMENT

**Future in Tech Club |** *President & Founder* **Jun. 2025 - Jun. 2026**
- Grew club to 30+ members, hosting speaker events and career workshops in SWE, AI, and Quantum Computing.

**Girls Who Code Club College Loop |** *Secretary & Event Coordinator* **Sept. 2024 - Jun. 2026**
- Increased participation by 10% by managing external relations for guest speakers and leading Python workshops.

## AWARDS & TROPHIES

- **Scholarships:** Peter Perkins & Sprague STEM | **Microsoft AI Skills:** 6 Trophies (Azure, Fabric, Copilot, etc.)
