EDUCATION

University of California, Berkeley <i>Bachelor's Degree, Computer Science</i> <i>Relevant Coursework:</i> Discrete Math/Probability, DSA (C++/Java), Linear Algebra, Struct. & Interpretation of Comp. Programs	Jun. 2028
Santa Monica College <i>Associate in Science for Transfer (AS-T), Math & Computer Science (Highest Honors, Scholars/STEM Program)</i>	Jun. 2026

SKILLS

Languages: Python, C++, Java, C, C#, JavaScript, SQL, HTML/CSS, Assembly
AI, ML & Data: Large Language Models, Computer Vision, Sentiment Analysis, Random Forests, Scikit-learn, Pandas, NumPy, Matplotlib, Reinforcement Learning from Human Feedback (RLHF), Graph Neural Networks (GNNs), Linear Regression, Natural Language Processing (NLP)
Tools: GitHub Actions (CI/CD), Docker, Microsoft Azure/Fabric, Streamlit, VS Code/Xcode, APIs (REST, Gemini, Onyx), Linux, MongoDB
Core Competencies: DSA, OOP, Web Development, Debugging, System Architecture, GPU Computing, Authentication/Security

EXPERIENCE

NASA Jet Propulsion Laboratory (JPL) , La Cañada Flintridge, CA <i>Software Engineering Intern</i>	Jun. 2026 - Present
- Accelerating DSN antenna schedule deconfliction by 4+ hours per phase by developing Python automation scripts and ML models querying 100,000+ space mission data entries from MongoDB to optimize network resources. - Reducing manual scheduling overhead by over 20% by integrating LLMs into an NLP automation pipeline to parse complex mission constraints and execute routine workflows. - Achieving approx. 74% accuracy by validating predictive models and automated pipeline scripts against past DSN mission logs.	
<i>Student Research Intern</i>	Dec. 2024 - Jun. 2025
- Benchmarked next-gen multi-core and DSP/GPU architectures to optimize high-performance onboard space computing. - Engineered 3 virtual test environments (including NVIDIA Omniverse) with GNNs and AI to simulate space missions. - Secured access across platforms by developing authentication and registration systems utilizing spatial web properties.	
Santa Monica College , Santa Monica, CA	Oct. 2025 - Jun. 2026
<i>Supplemental Instructor for Data Structures & Algorithms in C++ & CS Tutor</i>	
- Led weekly sessions providing multi-language support (C++, C, C#, Java) for 150+ students focusing on logic, debugging, and complex topics like Trees, Heaps, and Stacks. - Streamlined student workflows using GitHub Actions and professional VS Code environments. - Debugged complex memory and pointer issues in real-time, helping students master manual memory management.	
Handshake , Los Angeles, CA (Remote)	Feb. 2026 - May 2026
<i>AI Trainer</i>	
Enhanced Multimodal LLM response accuracy and alignment across 3 data modalities (video, image, and text) by executing RLHF workflows and evaluating complex technical outputs for frontier AI labs.	

PROJECTS

Ticker Talk AI	
- Engineered a predictive price model forecasting next-close targets and ± 1 standard deviation volatility bands by fitting Linear Regression algorithms on 60-day rolling time-series datasets using Scikit-learn, Pandas, and NumPy. - Ensured thread-safe concurrent chart rendering and prevented API rate-limit throttling by implementing RLock synchronization and a 600-second TTL data cache layer for real-time Finnhub and yfinance REST streams.	
LensAI	
- Engineered a multimodal vision app using the Gemini 2.5 Flash API to generate 3-part contextual photo analyses. - Prevented API 429 crashes by building a 3-attempt exponential backoff loop and multi-turn session memory.	

LEADERSHIP & COMMUNITY INVOLVEMENT

Future in Tech Club <i>President & Founder</i>	Jun. 2025 - Jun. 2026
Grew the club to 30+ members, organizing guest speaker events and career workshops in AI and Quantum Computing.	
HackSMC <i>Logistics Lead</i>	Jan. 2026 - Apr. 2026
Delegated tasks to a team of 8 organizers for a 100+ person hackathon, provisioning hardware, WiFi, & technical resources.	
Girls Who Code Club College Loop <i>Secretary & Event Coordinator</i>	Sept. 2024 - Jun. 2026
Increased participation by 10% by managing external relations for guest speakers and leading hands-on Python workshops.	

AWARDS & BADGES

Scholarships: Peter Perkins & Sprague STEM Microsoft AI Skills Challenge: 6 Learning Trophies (Azure, Fabric, Copilot, etc.)
